Development History The ideal place to start for this database is the PC engine development log. The current development log is being kept at GitHub, and you can find it here. I am aware that development went from bleeding-edge to stable, so as you see, the current log is not precise enough. What I need is for you to locate where development stopped, find what the last version of that engine was, and when that version was updated. For example, for Mednafen, the most recent release is v3.9.91. This must be related to what version of the engine updates, and if the engine has been patched since then, I need to know what the next version of the engine is. Current Mednafen Development log is available here: Links Technical Documentation: Development Log: Source Code: Bios A: Here's all the release history for the PCENGINE engine. I also have instructions on how to build Mednafen using the official PCENGINE source code. PCENGINE 4.8.2 was made available the 23rd of February, 2010. The previous version (4.8.1) was released on the 19th of January, 2010. The first beta version (4.8.2-beta2) was made available on the 26th of February, 2010. The previous beta version (4.8.2-beta1) was made available on the 21st of January, 2010. The final version was made available on the 20th of August, 2010 (4.8.2) and the beta versions were made available on the 18th of August, 2010 (4.8.2-beta1) and the 22nd of July, 2010 (4.8.2-beta2). Here's the history. The reasons for each revision can be found in the wiki. Updates were made to the API of the engine so I didn't have to split off the data files, the graphics file format and graphics API. PCENGINE 4
